2.2.1. Linear search Technique

04:45

Write a program to check whether the given element is present or not in the array of elements using linear search.

Input format:

- The first line of input contains the array of integers which are separated by space
- The last line of input contains the key element to be searched

Output format:

- If the element is found, print the index.
- If the element is not found, print **Not found**.

Sample Test Case:

Input:

1 2 3 4 3 5 6

3

Output:

2

```
# Read input array
arr = list(map(int, input().split()))
```

```
# Read key element
key = int(input())
```

```
# Linear search
found = False
for i in range(len(arr)):
    if arr[i] == key:
        print(i)
        found = True
        break
```

```
# If not found
if not found:
    print("Not found")
```

Average time
0.010 s
9.75 ms

Maximum time
0.012 s
12.00 ms

✓ 2 out of 2 shown test case(s) passed

✓ 2 out of 2 hidden test case(s) passed

✓ Test case 1 10 ms Debug

Expected output

1 2 3 4 3 5 6

3

2

Actual output

1 2 3 4 3 5 6

3

2

✓ Test case 2 12 ms
